**Course Code: SSE-513 Development Economics**

*Time Allowed: 2 Hours*

*Maximum Marks: 30*

**Section A (Attempt all parts of this section)**

**(2\*3=6 marks)**

1. Differentiate between Economic Growth & Economic Development
2. Differentiate between IMR, NNMR & Child Mortality rate
3. Differentiate between Absolute Poverty & Relative Poverty

**Section B (Attempt any two questions)**

**(4\*2=8 marks)**

1. With the help of diagram, explain how the 'natural increase' in population does occur and what reasons account for the same.
2. For the development process of an economy, the two fundamental resource flows or the interaction between the two sectors of an economy is of great importance. In this context, throw some light on the model explained by Prof. Arthur Lewis.
3. Briefly explain the different methods of calculating poverty.

**Section C (Attempt any Two questions)**

**(2\*8=16 marks)**

1. The story of a poor does not ends with his present condition but extends to his future suffering. In this context explain, what are the problems associated with estimating the poverty. What are the impacts of poverty state? In your opinion, is it impossible for a person to come out of the poverty phase permanently?
2. In your own words explain the stages of growth in accordance to the traditional approach.
3. Migration from one place to other, more specifically from rural to urban areas is based on various reasons. But such a decision would be rational only if.....
